# Highlights

## Smooth surface

Smooth surface and high-quality finishing

## High color rendering (CRI>80)

The color rendering index (CRI) is used to describe the effect of a light source on color appearance. Natural outdoor light has a CRI of 100 and is used as the standard of comparison for any other light source. The CRI of Philips LED light bulbs is always higher than 80, close to the sun's value, reflecting colors truly and naturally.

## Lifetime 15

Providing the same incandescent look and feel, while offering the much longer lifetime.

## Saving up to 80%

Providing the same incandescent look and feel, while offering the high energy saving in the same time.

## 2000 K [LED]

Light can have different color temperatures, indicated in units called Kelvin (K). Bulbs with a low Kelvin value produce a warm, more cozy light, while those with a higher Kelvin value produce a cool, more energizing light.
